

* Technology Stack*

Frontend: Flutter / React Native
Backend: Firebase / Node.js
Database: Firestore / MongoDB
Server: Firebase(Need free server)

System Structure

- * User Panel (Mobile App)
- * Admin Panel (Web)

*** User Panel (Mobile App)***

1. Authentication (OTP-based email login)

2.App Preview Screens

Screen 1

- * SS Of Home screen of Schedule module.
- * Headline: *Organize your daily life*
- * Sub: *Turn chaos into calm*

Screen 2

- * SS Of Home screen of goal module.
- * Headline: *From goals to achievements*
- * Sub: *Stay focused & achieve more*

Screen 3

- * SS Of Home screen of Report module.
- * Headline: *Turn data into decisions*
- * Sub: *Plan ahead & grow*

Core Features

1.Schedules

A “+ (Add Schedule)” button is displayed on the main Schedules Home Screen.
On clicking the + button, the Add Schedule Form opens.

2. Add Schedule Form – Fields & Inputs

2.1 Basic Fields

Schedule Name (Text Field-validation:min=0,max=50)

User enters the name of the schedule (e.g., Morning Workout, Study Time).

User selects a specific time (e.g., 5:10 AM / PM).

Multiple same time is allowed for different schedules.

2.2 Date & Day Selection

Days Selection (Multi-select)

Options: Monday to Sunday.

Used for recurring schedules within a week(current dates will be stored for report generation).

From Date – To Date (Not mandatory),date should be present or future.

If date range not selected → schedule works based on selected days only.

If selected → schedule runs only within the date range.

If select both →(current dates will be stored for report generation).

2.3 Sound & Voice Settings

Default: System Ringtone

On clicking sound: Show list of system ringtones

Provide a “+” button to add custom audio

On clicking “+” → open device storage → show user music files

Sound Toggle (ON/OFF)

Radio button placed beside sound option

If OFF → no sound plays

Read Schedule Name Aloud (Text-to-Speech)

Option: “Read time and schedule name aloud”

Radio button ON/OFF

Behavior:

If ON:

First → system speaks schedule name using TTS

Then → selected sound/music plays(total less than 30seconds)

If OFF:

Only sound plays (if enabled)

2.4 Notification Settings

Notification Reminder (Dropdown)-Options:

Before 15 minutes

Before 10 minutes

Before 5 minutes

Before 1 minute

Behavior:

User receives notification in status bar:

“Your next target is [Schedule Name]”

2.5. Save & Actions

At the bottom (Footer):

Save Button

Cancel Button

Behavior:

On Save → schedule is stored and shown on Home Screen

On Cancel → discard all inputs

2.6. Display on Home Screen

Each saved schedule appears as a card/box layout

Cards show:

Schedule Name

Time

Days / Date range, if both selected then show only date range

2.7. Schedule Completion Logic

Mark as Completed

A three-dot menu () is shown near the + button or on each schedule

Option: Mark as Completed

Behavior:

When clicked: Schedule status → Completed and Data sent to Reports Module

2.8 Default Status

By default → all schedules are Pending

2.9 Restriction

Once marked Completed:

Cannot revert back to Pending

2.10 Completion Timing Rule

User can mark schedule as completed only after scheduled time has passed

2.11. Edit Schedule

On clicking a saved schedule card:

Open Edit Screen

All fields pre-filled

Footer buttons:

Save (update changes)

Cancel

2.12. Delete Schedule

Single Delete

Long press on a schedule

Show delete option

Multiple Delete

Multi-select schedules via long press, Delete option available

2.13 Restrict Deletion

Cannot delete:

Completed schedules

Past schedules

Only allow deletion for future tasks

Completed schedule next day pending hona chahiye if s+“96 djelected for multiple days

2.14 Additional Functional Logic

Validation Rules

Schedule Name → Not Mandatory

Time → Mandatory

At least one: Day OR Date range must be selected

8.2 Edge Cases

If both Day & Date selected → schedule runs only on matching days within date range

If sound OFF & TTS OFF → only silent notification triggers

If notification time overlaps with current time → trigger jo pehle saved hua hoga

* If multiple schedules at same time:

- * Queue notifications

- * Avoid overlapping sound: If user select same time twice or more than twice than jo Pehle schedule set kiya hoga vo Pehle notify hoga (30 seconds time rahega sound ka).

:suppose 5:00 am me 3 schedule set kiye then jo Pehle 2 set kiye honge vo 30 seconds me notify karenge aur 3rd vala ka notification pop up aayega status bar pr sound nh bcz set time nikal chuka hoga.

2.15 Technical Notes (For Developer)

Use:

Time Picker API

Local Notifications

Text-to-Speech (TTS) Engine

Media Picker for audio files

Store:

Schedule ID

Status (Pending/Completed)

Timestamps for tracking reports

Goal Module – Step-by-Step Flow

1. Create Goal

User clicks on “+” (Add Goal) button from Goal screen.

A form opens with following fields:

Goal Name (Text input-validation: min=1, max=100)

From Date (Start date picker)

Due Date (End date picker)

Priority (Dropdown: 1st → 10th)

Notification Time (Dropdown options below)

2. Priority Logic (Based on User Level)

User goal capacity depends on streak level:

Beginner (0–49 streaks): Max Goals Allowed: 10

Intermediate (50–99 streaks): Max Goals Allowed: 20
Advanced (100/100+ streaks): Max Goals Allowed: 30

If user reaches limit: Show message: “Goal limit reached. Increase streak to unlock more goals.”

3. Notification Time Options- User selects when they want reminder:

1 hour before(means 9:00 am on due date)
12 hours before(means 10 pm of 1day before from due date)
1 day before(10 am of 1day before from due date)
2 days before
3 days before
4 days before
5 days before
Daily (till goal is completed or due date ends)

Important Logic:

Standard notification trigger time: 10:00 AM
Notifications calculated based on Due Date

Example:

Due Date: 10 May
Selected: 2 days before
Notification: 8 May, 10:00 AM

Special Case: If goal is created for same day → No notification sent

4. Goal Display (Home Screen UI)
All saved goals are shown in card/box format
Each goal card displays:
Goal Name
Due Date
Priority
Status (Pending / Completed)

5. Three-Dot Menu (Options)-Each goal card has 3-dot menu with options:

Mark as Completed
Edit Goal
Delete Goal

6. Complete Goal Flow
User clicks “Completed”
Goal status becomes Completed
Goal is locked (no further changes allowed)

Important Rules: Once completed → Cannot revert status, No “Undo” option available

7. Post Due Date Completion
User can complete goal even after due date
System still accepts completion
Used for report tracking accuracy

8. Edit Goal- User can edit: Goal Name, Dates, Priority, Notification time
Restriction: Cannot edit if goal is already completed

9. Delete Goal

User can delete any goal

Show confirmation popup:

“Are you sure you want to delete this goal?”

10. Notification Message Format

User receives reminder like:

“Complete your [Goal Name]. Its due date is [Date].”

Example: “Complete your Workout Goal. Its due date is 10 May.”

11. Daily Notification Logic (If Selected)

If user selects Daily

Notification triggers every day at 10:00 AM

Stops when:

Goal is completed OR

Due date is crossed

12. Reports Calculation

When goal is marked completed:

Data is sent to Reports Module

Metrics updated:

Completion Rate

On-time vs Late Completion

Total Goals Completed

13. Edge Cases Handling

Same day goal → No notification

Past due date → Completion allowed

Completed goal → No edit (optional: allow delete only but deleting should not affect positive result of user)

Goal limit reached → Block new creation

14. UX Notes (Important for UI Design)

Highlight:

High priority goals

Completed goals

** Notes Module** *Refer image*

* Create note (+ button)

*Save automatically

* Edit note

* Delete note

* Search notes

* Color notes

* Max pages: 200(give validation message after 200 pages and block creation)

Suggestions Module Refer image* [Store suggestions in Firebase, so you can change them anytime without updating the app]-

Admin Content Upload Flow

Admin can manage content via web panel:

1. Create **Category** (e.g., Productivity)
2. Create **Subcategory** (e.g., Focus Tips)
3. Add:

- * Heading
- * Subheading
- * Content (text/articles)

User Flow

- * Select category
- * Select subcategory
- * Click on generate button
- * View content

** Reports Module** *Refer image*

Filter by date

* Show:

- * Pending tasks
- * Completed tasks
- * Total tasks
- * Productivity Score (* Based on completion % *)

Visuals:

- * Bar chart
- * Line graph

Task Summary Section: System divides tasks into:

On-Time Completed (Completed before due date)
Late Completed (Completed after due date)
Pending (Not completed yet)
Also calculates % of each

1. Productivity Score Insights

If $\geq 80\%$ Insight: “Excellent consistency! You are highly productive ”

If $60\% - 79\%$ Insight: “Good progress! You are on the right track ”

If 40% – 59% Insight: “Average performance. Try to improve consistency.”

If < 40% Insight: “Low productivity. Focus on completing tasks regularly.”

System generates PDF includes: Summary, Charts, Task list, Insights

Real-Time Update

Whenever user:

Completes a task

Adds a task

Deletes a task

System:

Re-fetches data

Recalculates everything

Updates UI instantly

Complete Flow (Simple)

User Selects Filter

Click Generate Report

Fetch Data from DB

Calculate Metrics

Generate Charts + Insights

Display Report

Streak System

* +1 → Complete schedule

* +5 → Complete goal

When a user have 100streaks,200streaks,...upto....100000 streaks, he will be able to share his streak on social media apps with a message like I got 100 streaks by completing 80 tasks on ____ app.

Download the app now and boost your productivity in daily life.

*Unique Referral Link : Generate a unique link per userexample.com/app?ref=USER123

User shares this link anywhere (WhatsApp, Instagram, etc.)

You reward ONLY when: Someone clicks the link

OR

Someone installs & signs up using that link

Reward Logic:

Click → +2 streak

Signup → +10 streak

Streak Notifications

- * " Your streak will break if you don't continue!"(notification trigger when user not active on app for last 2days).
 - * " You unlocked Intermediate Level!" (when user gain 50 streaks)
 - * " You reached Advanced Level!" (when user gain 100 streaks)
 - " Share your milestone on social media apps" [when user gain 50,100,200,300,.....streaks].
